The world’s leading trade fair for lighting and building services technology
Light + Building 2016: Presenting trends, setting records, getting ahead.

“Where modern spaces come to life: digital – individual – networked”. That was the slogan of Light + Building 2016, which placed the theme of digitisation clearly at the centre of its activities. Over the six days of the fair, more than 216,000 international trade visitors (+ 3%) were inspired by intelligent solutions, future-oriented technologies and networking as well as the latest design trends.

The focus of the more than 2,600 exhibitors (up 5% on the previous event) was on trends in the lighting market, the influence of light on the human body, networked security technology, intelligent building technology and efficient energy management.

With its broad offer and the strong growth in visitor and exhibitor numbers, Light + Building once again confirmed its position as a leading world trade fair. And that’s by no means all. Decision makers from across the globe meet up in Frankfurt am Main to discover innovations in lighting, electrical engineering and home and building automation.

As an exhibitor, you benefit from an international platform on which to present your latest product ideas and strengthen your market presence. At Light + Building 2018!
Light + Building speaks all languages – especially yours
