

PLAN.ONE

**THE INTELLIGENT ASSISTANT
SUPPORTS YOU, AS A SPECIFIER,
IN FINDING SUITABLE PRODUCTS
FOR YOUR BUILDING PROJECT.**

Directly integrated in your planning software, it gives you suggestions for products that are perfectly suited to your building project.

Intuitive. Fast. With just one click.

A comprehensive and clearly designed product comparison creates market transparency, allowing informed decisions to be made. Manufacturers can make all relevant product information available centrally via Plan.One. This way architects get access right from the very early stages of a project. In addition to BIM models, specifiers have access to all the technical data from the whole product portfolio, which they can easily incorporate in their construction projects.

This is planning with Plan.One.

PLAN.ONE

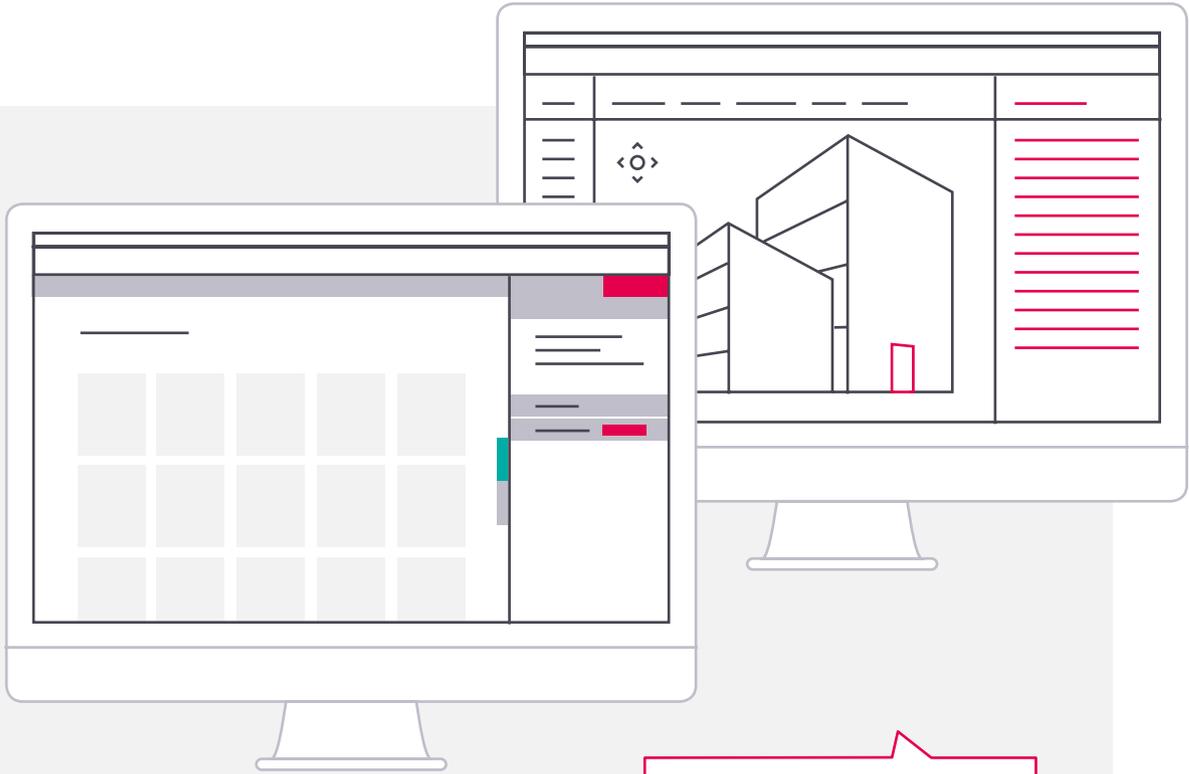

THREE STEPS TO THE PERFECT PRODUCT

Using Plan.One is easy. Simply create a profile at www.Plan.One and start your search for the perfect product directly via the website.

Do you use BIM-compatible planning software? Then you can also use Plan.One as a plug-in directly from your planning software. Simply download the plug-in from our website and install it with just a few clicks.

Plan.One - planning can be this easy.

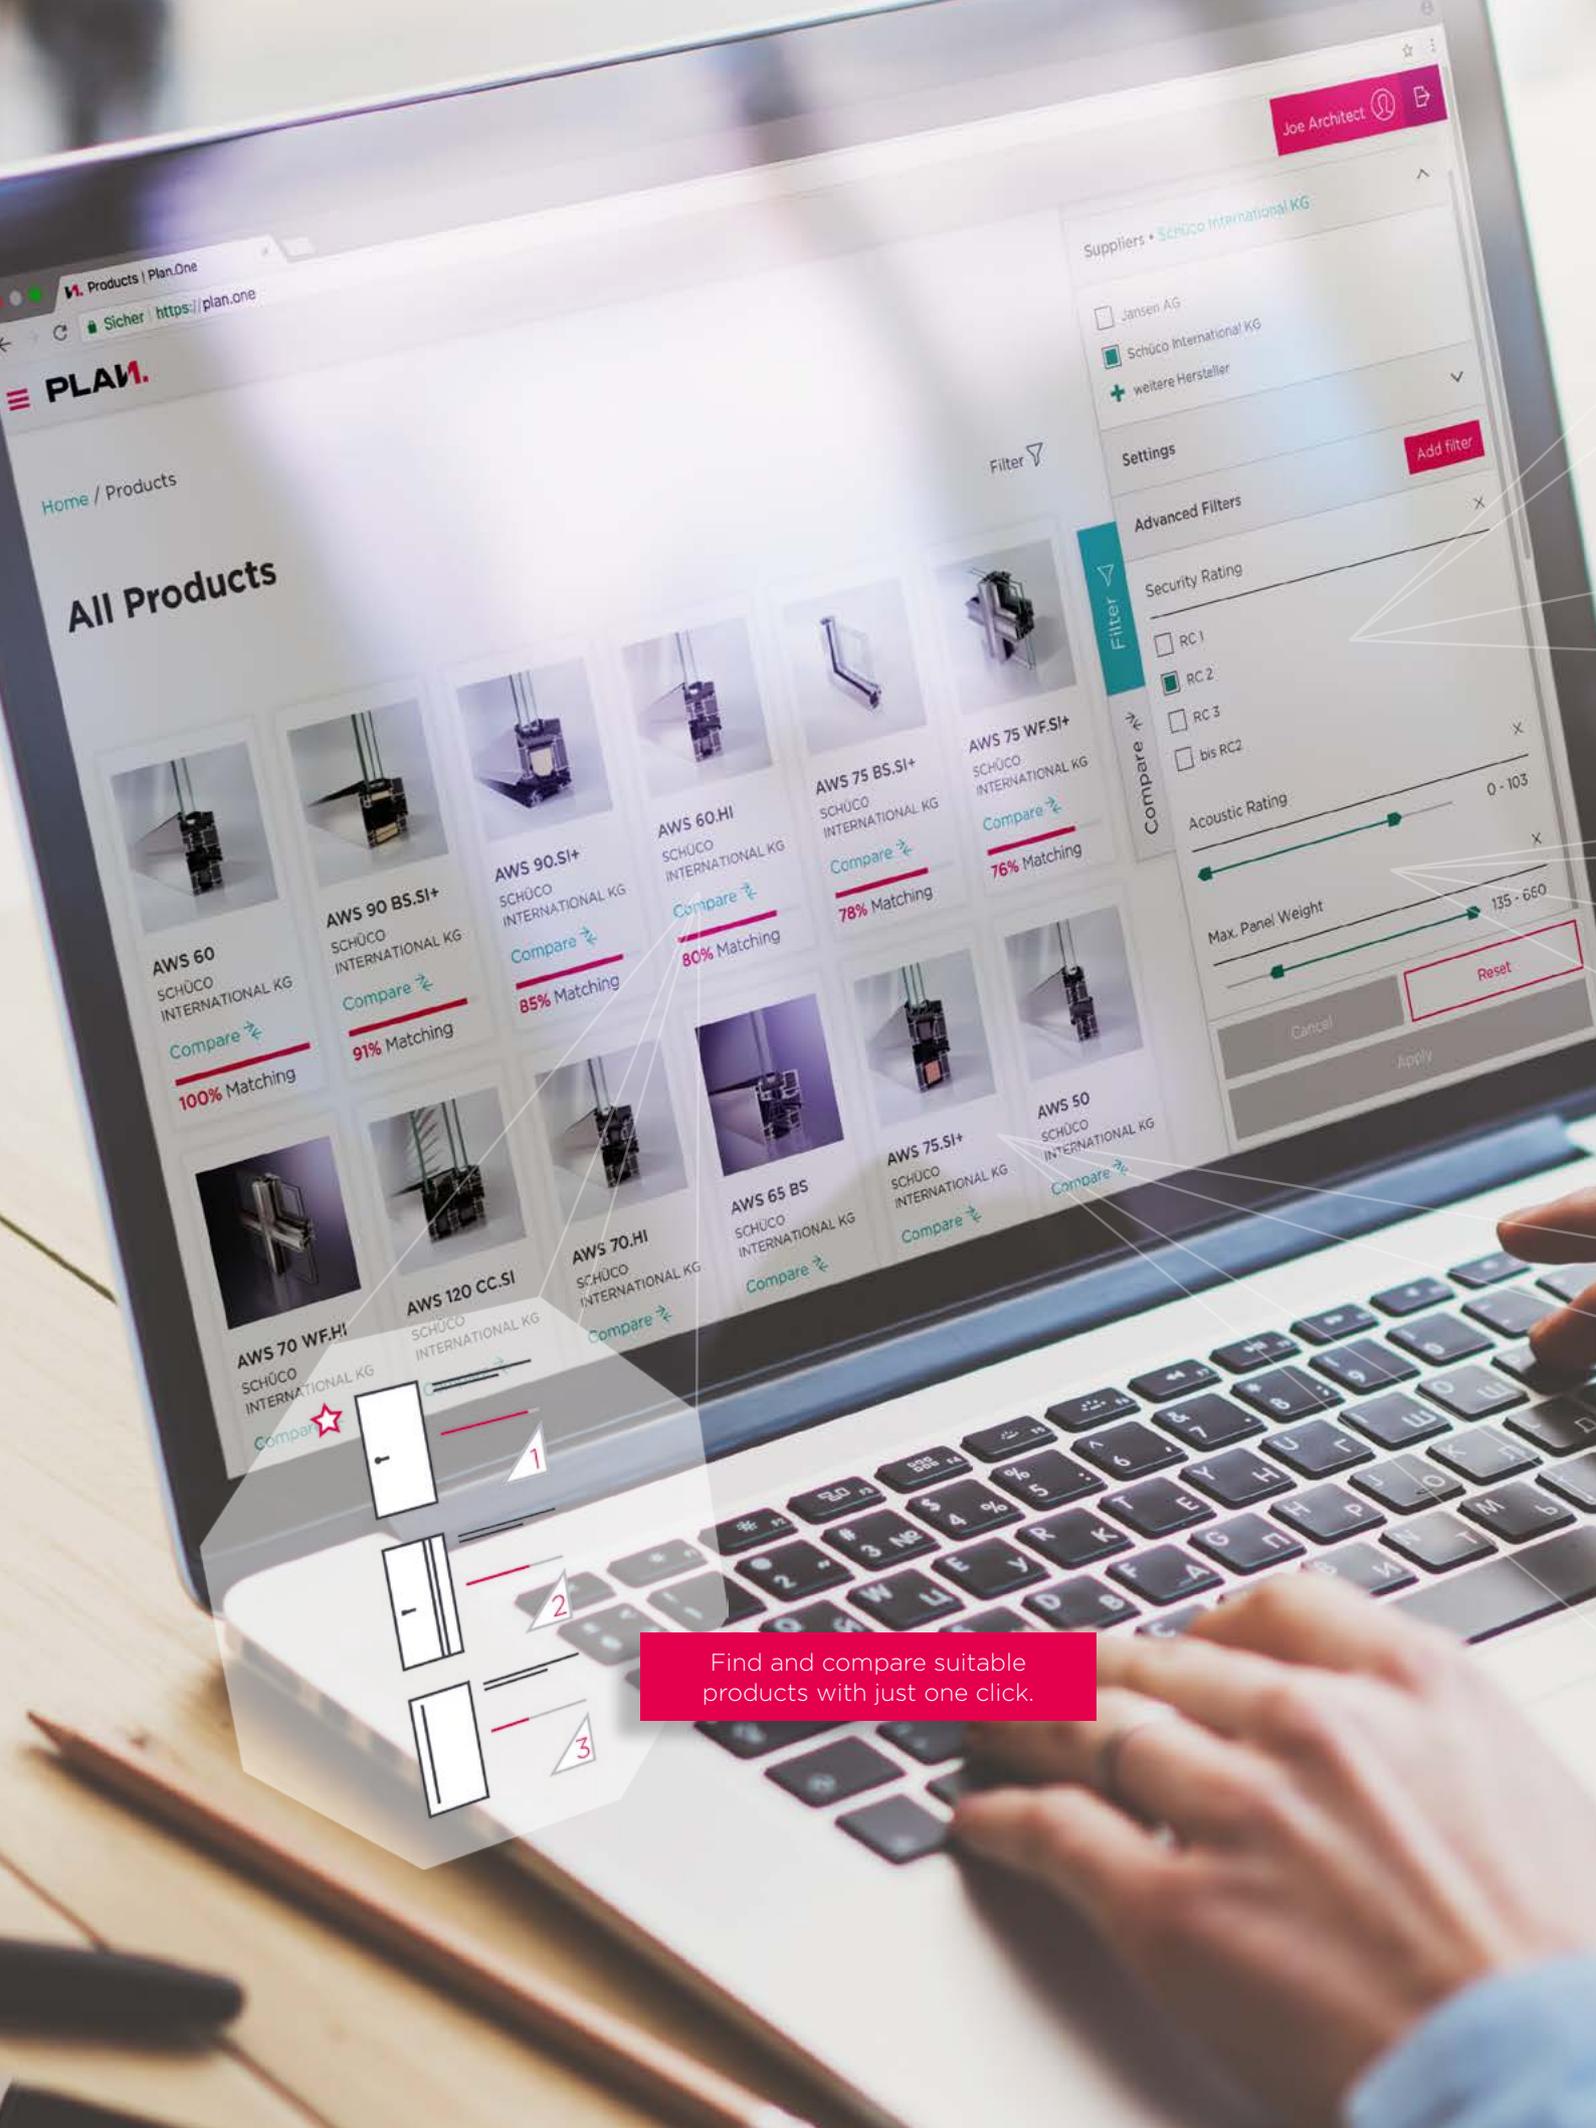

Search. Find. Plan.
Directly in Revit and
ArchiCAD or simply
at www.Plan.One

Find and compare suitable products with just one click.

Identify market trends on the basis of search queries.

Communicate with customers directly via Plan.One.

Download product data and BIM models directly into projects.

THE MATCHING FACTOR

YOU DECIDE HOW THE SEARCH IS SET UP

The matching factor shows you at a glance how well the products that are shown match your search enquiry. And you decide what is the most important thing for you.

The calculation is based on the following three criteria, which can be weighted individually:

Technical properties

Match the search parameters with the technical properties of the products.

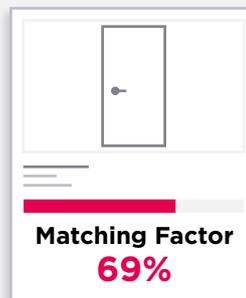

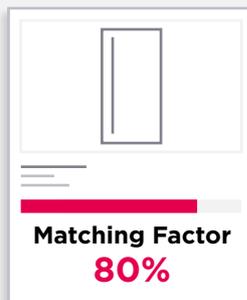

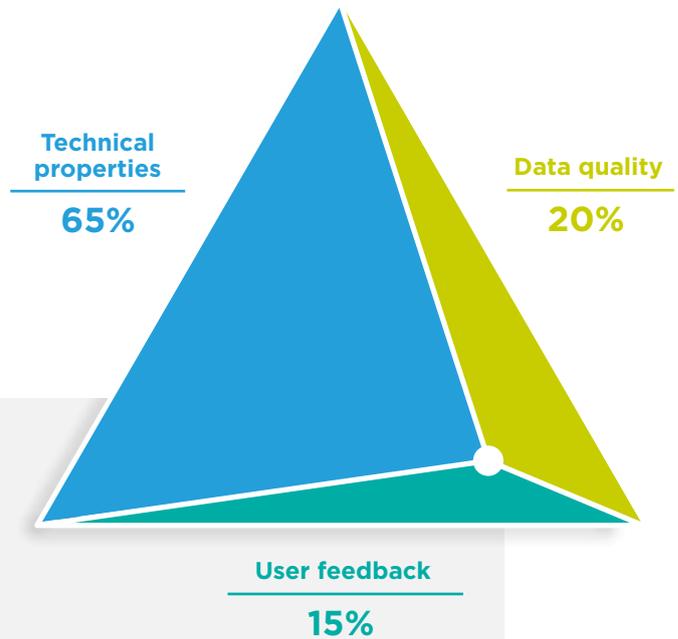

Data quality

Completeness of the product information given by the manufacturer.

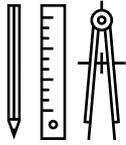

User feedback

Take into account product assessments by other architects.

COMPETITIVE ADVANTAGE

WHAT MAKES PLAN.ONE UNIQUE?

ARCHITECTS

Suitable products with just one click – find, compare and incorporate them in your planning model.

Through a plug-in, all Plan.One functions are available from within the architect's familiar planning environment. There is no need for additional software.

Access to BIM models as well as the manufacturer's whole product portfolio.

Reliable planning data thanks to real-time comparison with all manufacturers. Access to the latest product data from a range of manufacturers.

Identify the latest trends in order to develop and set new ones.

MANUFACTURERS

Presentation of product information in line with current market requirements.

Thanks to perfect synchronisation with your existing product database, no additional maintenance is required.

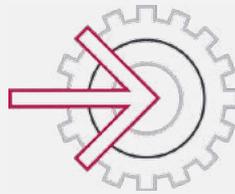

Straightforward presentation of the whole product portfolio, not only limited to BIM models.

Make the latest product information available to the whole market in real time.

Targeted product development on the basis of customised analyses of global search enquiries.

Unique product finder

Workflow integration

Product catalogue

Real-time synchronisation

Understand the market, identify trends

PLAN.ONE

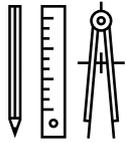

MAPPING

An efficient search for the right product and an appropriately transparent product comparison require the standardisation of the technical properties of construction products. Plan.One builds on the established international IFC standard, combines it with the buildingSMART Data Dictionary and expands this basis, if necessary, in direct coordination with manufacturers.

Our Plan.One mapping interface enables architects and manufacturers alike to continue working on

the basis of their internal names for product properties and also to exchange product information in both directions.

Plan.One doesn't give you new working methods, it improves your existing ones for the long term.

PLAN.ONE - CONNECT FOR SUCCESS

Plan.One is the digital solution for greater efficiency in the construction industry. Tailored to the needs of everyone involved in a building project and developed by the industry for the industry, it establishes a new platform-based digital cooperation.

Plan.One has set itself the initial aim to closely connect specifiers and construction product suppliers as a comparison portal for construction products. The intelligent search assistance allows products to be found and compared in detail based on technical project requirements.
