@jurdzi

Student of the Master's Course at the Faculty of Design in Warsaw. Gained an enriching experience in CizsakDalmas studio in Madrid and Clap studio in Valencia during a summer internship. She is a multidisciplinary designer with a background in product, interior and graphic design. In her works Anna is interested in the relation between object and space: she emphasizes on the importance of creating objects that generate a unique and subtle experience for people who use them.

At the Light + Building Anna presented a solution to create a unique interior ambiance by giving the user a tool to interact with light and shadow on a deeper level. The "Space as an object" lamp is based on a single, independent, LED light source. The LED light source with a double-layered disc is linked to a connector which allows them to be arranged in an unlimited number of positions and orientations. Each combination based on the balance of light and shadow produce a different character, visual composition and function. The lamp is fully foldable with no welded parts.
