A photograph of two women in a trade fair setting. The woman on the left, with blonde hair and wearing a dark blue quilted jacket, is reaching out to touch a spherical, illuminated light fixture hanging from a stand. The woman on the right, with brown hair and wearing a pink sweater, is smiling and looking at the fixture. The background is blurred, showing other lights and structures of the fair.

RESTART!

## Light + Building 2022 – live and in person

The entire lighting and building services sector is finally meeting up again in person in Frankfurt am Main! Benefit from discussions with manufacturers, knowledge exchange with industry colleagues, interesting talks or simply having a coffee together at one of the stands. Look forward to the long-awaited and incomparable feel of a live trade fair.

### Breaking new ground

Building services technology has long since branched out from traditional well-worn paths. Manufacturers have developed solutions to the pressing issues of climate change, energy efficiency, digitalisation and will be presenting their innovative designs. Light+Building showcases the specific contribution that building services technology can make – in new, innovative presentations that are condensed and clearly structured, as well as being very hands-on and practical.

Don't miss out!

## Electrical vehicle meets building

What happens now when you park your car? The light in the building goes on, the electric car starts charging, the door opens via facial recognition and your favourite music plays. Digitalisation takes buildings to the next level. The applications are only limited by our imagination. The companies here are bringing future solutions to drive your business forward.

### Top themes at a glance:

“**Green Deal & Sustainability**” focuses on systems that help to sustainably increase energy efficiency in buildings and cities.

“**Electrification & Digitalisation**” is all about efficient planning, networking, connectivity and comfort in buildings.

“**Light & Design**” explores lighting quality and design and their key role in spatial and building planning.

## Intersec Building – safe and secure!

**intersec**  
building

Networked safety and security systems are an essential part of today's smart building. The integration of systems such as video surveillance and access control and their networking with building automation are key aspects. Light + Building brings these technologies together at **Intersec Building**. The **Intersec Forum** is accompanied by an exciting conference programme that covers the entire scope of safety and security at a single, compact event!
