

A FLEXIBLE, TWO-FACED OUTDOOR LIGHT

OUVA is a versatile outdoor light designed to meet a wide range of artificial lighting needs in open-air environments.

Whether playing table tennis after sunset, enjoying a picnic in the park on a mild June evening, or lighting up your own terrace, OUVA's glare-free light creates a warm and atmospheric ambiance.

A magnetic mechanism allows the light source to be separated from the shade, enabling OUVA to be used as both a pendant and a table lamp. The lamp is easy to transport and can be dimmed as needed, with adjustable color temperature for maximum flexibility.

OUVA

THE DESIGNERS

Noëlle Loke and Johanna Printz are product designers in the final year of their Bachelor's degree in Product Design at Universität der Künste Berlin.

Within this context, they developed their lamp OUVA, which emerged from their shared design philosophy. Observation, analysis, and interpretation of human habits within a social context form the foundation of their design practice. The insights they gain from this process are translated into objects that question the status quo and open up new possibilities for action on both a social and sustainable level.
